

Tema: SQL

Exercício

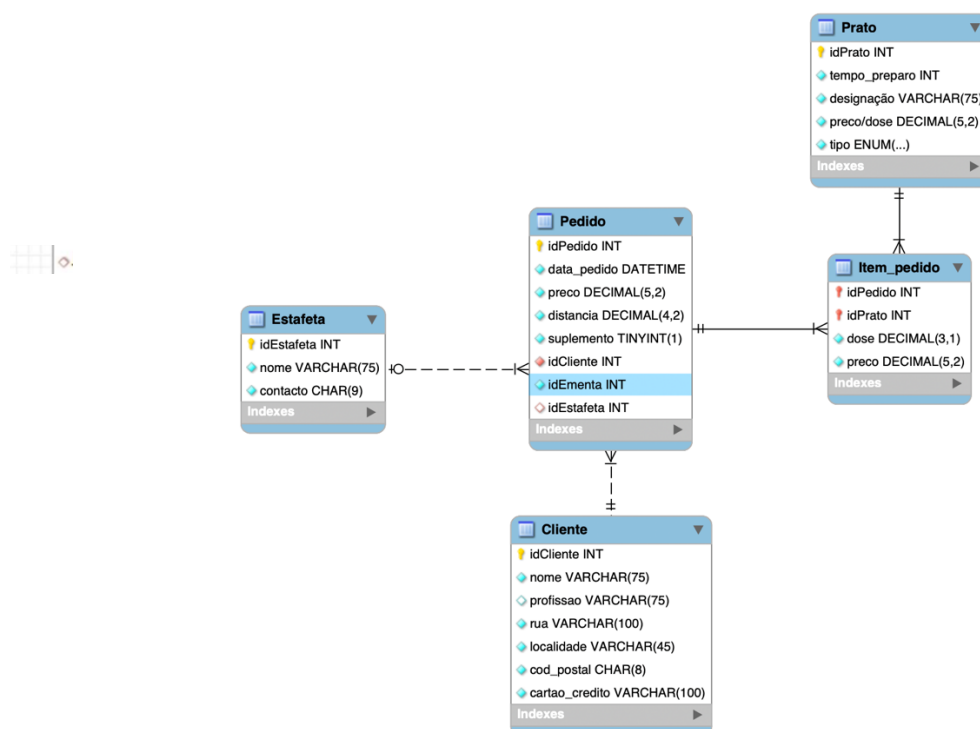

Figura 1 – Um esquema lógico de uma base de dados.

Consider the logical schema presented in Figure 1, relating to a database of a food delivery company. After carefully and thoroughly analysing the schema, write the SQL instructions that answer the following exercises.

1. List the name and contact of all delivery drivers, sorted by name in ascending order.
2. Show the name and price per serving of all dishes of type 'starter'.
3. Show the complete data of customers whose postal code starts with '47'.
4. List all orders whose price is between €10 and €50, sorted from most expensive to least expensive. Show only the 3 most expensive.
5. List the unique names of customers who placed at least one order after January 1, 2024.
6. Show the dish name, serving size and price of each order item, only for dishes of type 'main course' or 'dessert'.

7. Show the customer name, the order date and the delivery driver name, only for orders with an assigned driver made during 2025.
8. How many orders exist in the database? Present the result with the alias 'total_pedidos'.
9. What is the average price and the maximum price of the dishes? Use aliases 'preco_medio' and 'preco_maximo'. Round the average to 2 decimal places.
10. Show the number of orders placed by each customer. Show only customers with more than 1 order.
11. Show the total amount billed by each delivery driver, with the driver's name. Sort from highest to lowest.
12. Show the data of customers who have never placed any order.
13. Show the dishes that have already been included in some order.
14. Show a unique list with the locations of all customers and the locations of all orders. Remove duplicates.
